2. TARGET CONNECTION

This section contains information how to connect XPROG-m™ to various targets to access internal target resources such as EEPROM, FLASH, ROM,...etc.

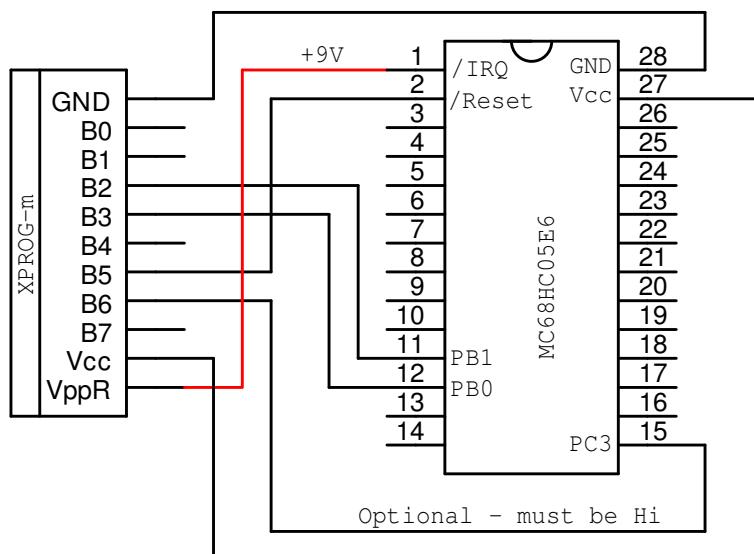

Note: Nets marked “Optional - must be Lo or Hi TTL logic level” not require connection with XPROG if they have described level in the circuit.

Note: Some circuit connections can disturb proper XPROG operation. In this case you must disconnect corresponding MCU pin from circuit.

Warning: XPROG Vpp and VppR pins have hi voltage who can damage circuit. If you are not sure that you can't damage circuit , you must disconnect this MCU pin from circuit.
